### **EDUCATION**

### • Brown University

ScM in Data Science - GPA: 4.00

Providence, Rhode Island September 2021 – Present

3 cp 10.... 20. 20.21 . . .

o Relevant Coursework: Machine Learning Pipelines, Applied Mathematics for Machine Learning, Deep Learning

### University of North Carolina - Chapel Hill

Chapel Hill, North Carolina

BS: Economics, Minor: Statistics, Highest Distinction and Honors - GPA: 3.88

August 2016 - December 2020

- o Relevant Coursework: Data Analysis Methods, Optimization, Advanced Econometrics, Linear Algebra, Calculus Series
- o Accolades: Phi Beta Kappa, Phillips Ambassador Scholar, Kakehashi Project Representative
- o Thesis: The Effects of Socioeconomic Characteristics on Ambient Air Pollution and the Decision to Over Pollute

#### SKILLS

- Languages: Python (scikit-learn, pandas, TensorFlow, Dask), R (caret, kernlab, shiny), Julia
- Tools/Technologies: SQL (PostgreSQL & MySQL), PySpark, Neo4J
- Other Languages: STATA, Excel, Mathematica, LATEX
- In Progress: NLP in python, web scraping in python, GraphQL, MongoDB, Kafka

#### Relevant Experience

## • Watson Institute for International and Public Affairs

Providence, RI

Data Science Research Assistant

January 2022 - Present

- Refining data provenance techniques to engineer additional spatial and socioeconomic features related to fatal police encounters in the US
- Engineering a python script to scrape census block group data from the Census Buearau's ACS-5 API given police violence victim residency data

### University of North Carolina - Chapel Hill Economics Department

Chapel Hill, NC

Research Assistant

December 2020 - April 2021

- Researched Monte Carlo simulation, supervised learning techniques, and casual inference conditions in econometric machine learning models to assist literature review efforts
- Implemented three machine learning models in scikit-learn and a sequential model in TensorFlow to simulate causal inference techniques for supermarket sales data

#### Jet Aviation Business Jets

Hong Kong

Operations Intern

June 2018 - August 2018

- Authored a process manual outlining unique value streams and risk mitigation protocols in daily operations to accommodate a transitioning senior management team
- Established client-facing interaction protocols to improve retention of high net worth accounts while maintaining critical quality and safety standards for private pilots

# PROJECTS

### • Spatiotemporal Approaches for Classifying Parking Violations

Fall 2021

Python: scikit-learn, Requests, Plotly; API: NYC Geoclient

 Developed a complete, reproducible ML pipeline via scikit-Learn for classifying 100 unique parking violation categories designated by NYC's Department of Finance. Coupled preexisting geolocation features and NYC's official Geoclient API to engineer granular coordinate data

### NLP Classification for Dark Web Narcotics Listings

Fall 2020

R: quanteda, caret, dplyr, ggplot2

 Employed natural language processing techniques to classify clandestine product listings on pre-scraped dark web marketplace data. Researched deep learning techniques to construct a feed-forward neural network, achieving an accuracy score 37% above a standard machine learning model baseline
